Nu-Way Industries is proud to introduce our new Laser Welding Technology. We have installed a Rofin Remote Laser Welder and a Rofin YAG Laser. Welding speeds up to 90 millimeters (3 inches) *per second*. This technology is a quantum leap forward in welding productivity.

The Rofin Remote is a 2500 watt CO2 rotating lens machine. The combination of articulated work control and 3D focusing allow it to weld in any position under the work area.

The Rofin YAG, (neodymium-doped yttrium aluminum garnet), is an articulated system that delivers the laser energy through a glass fiber cable for control and precision.

These technologies deliver speed, precision, and weld integrity that has to be seen to be believed.

Let **Nu-Way Industries** put this advanced equipment to work on your next project.
